Boletim de Previsão Regional

02/03/2026 a 08/03/2026

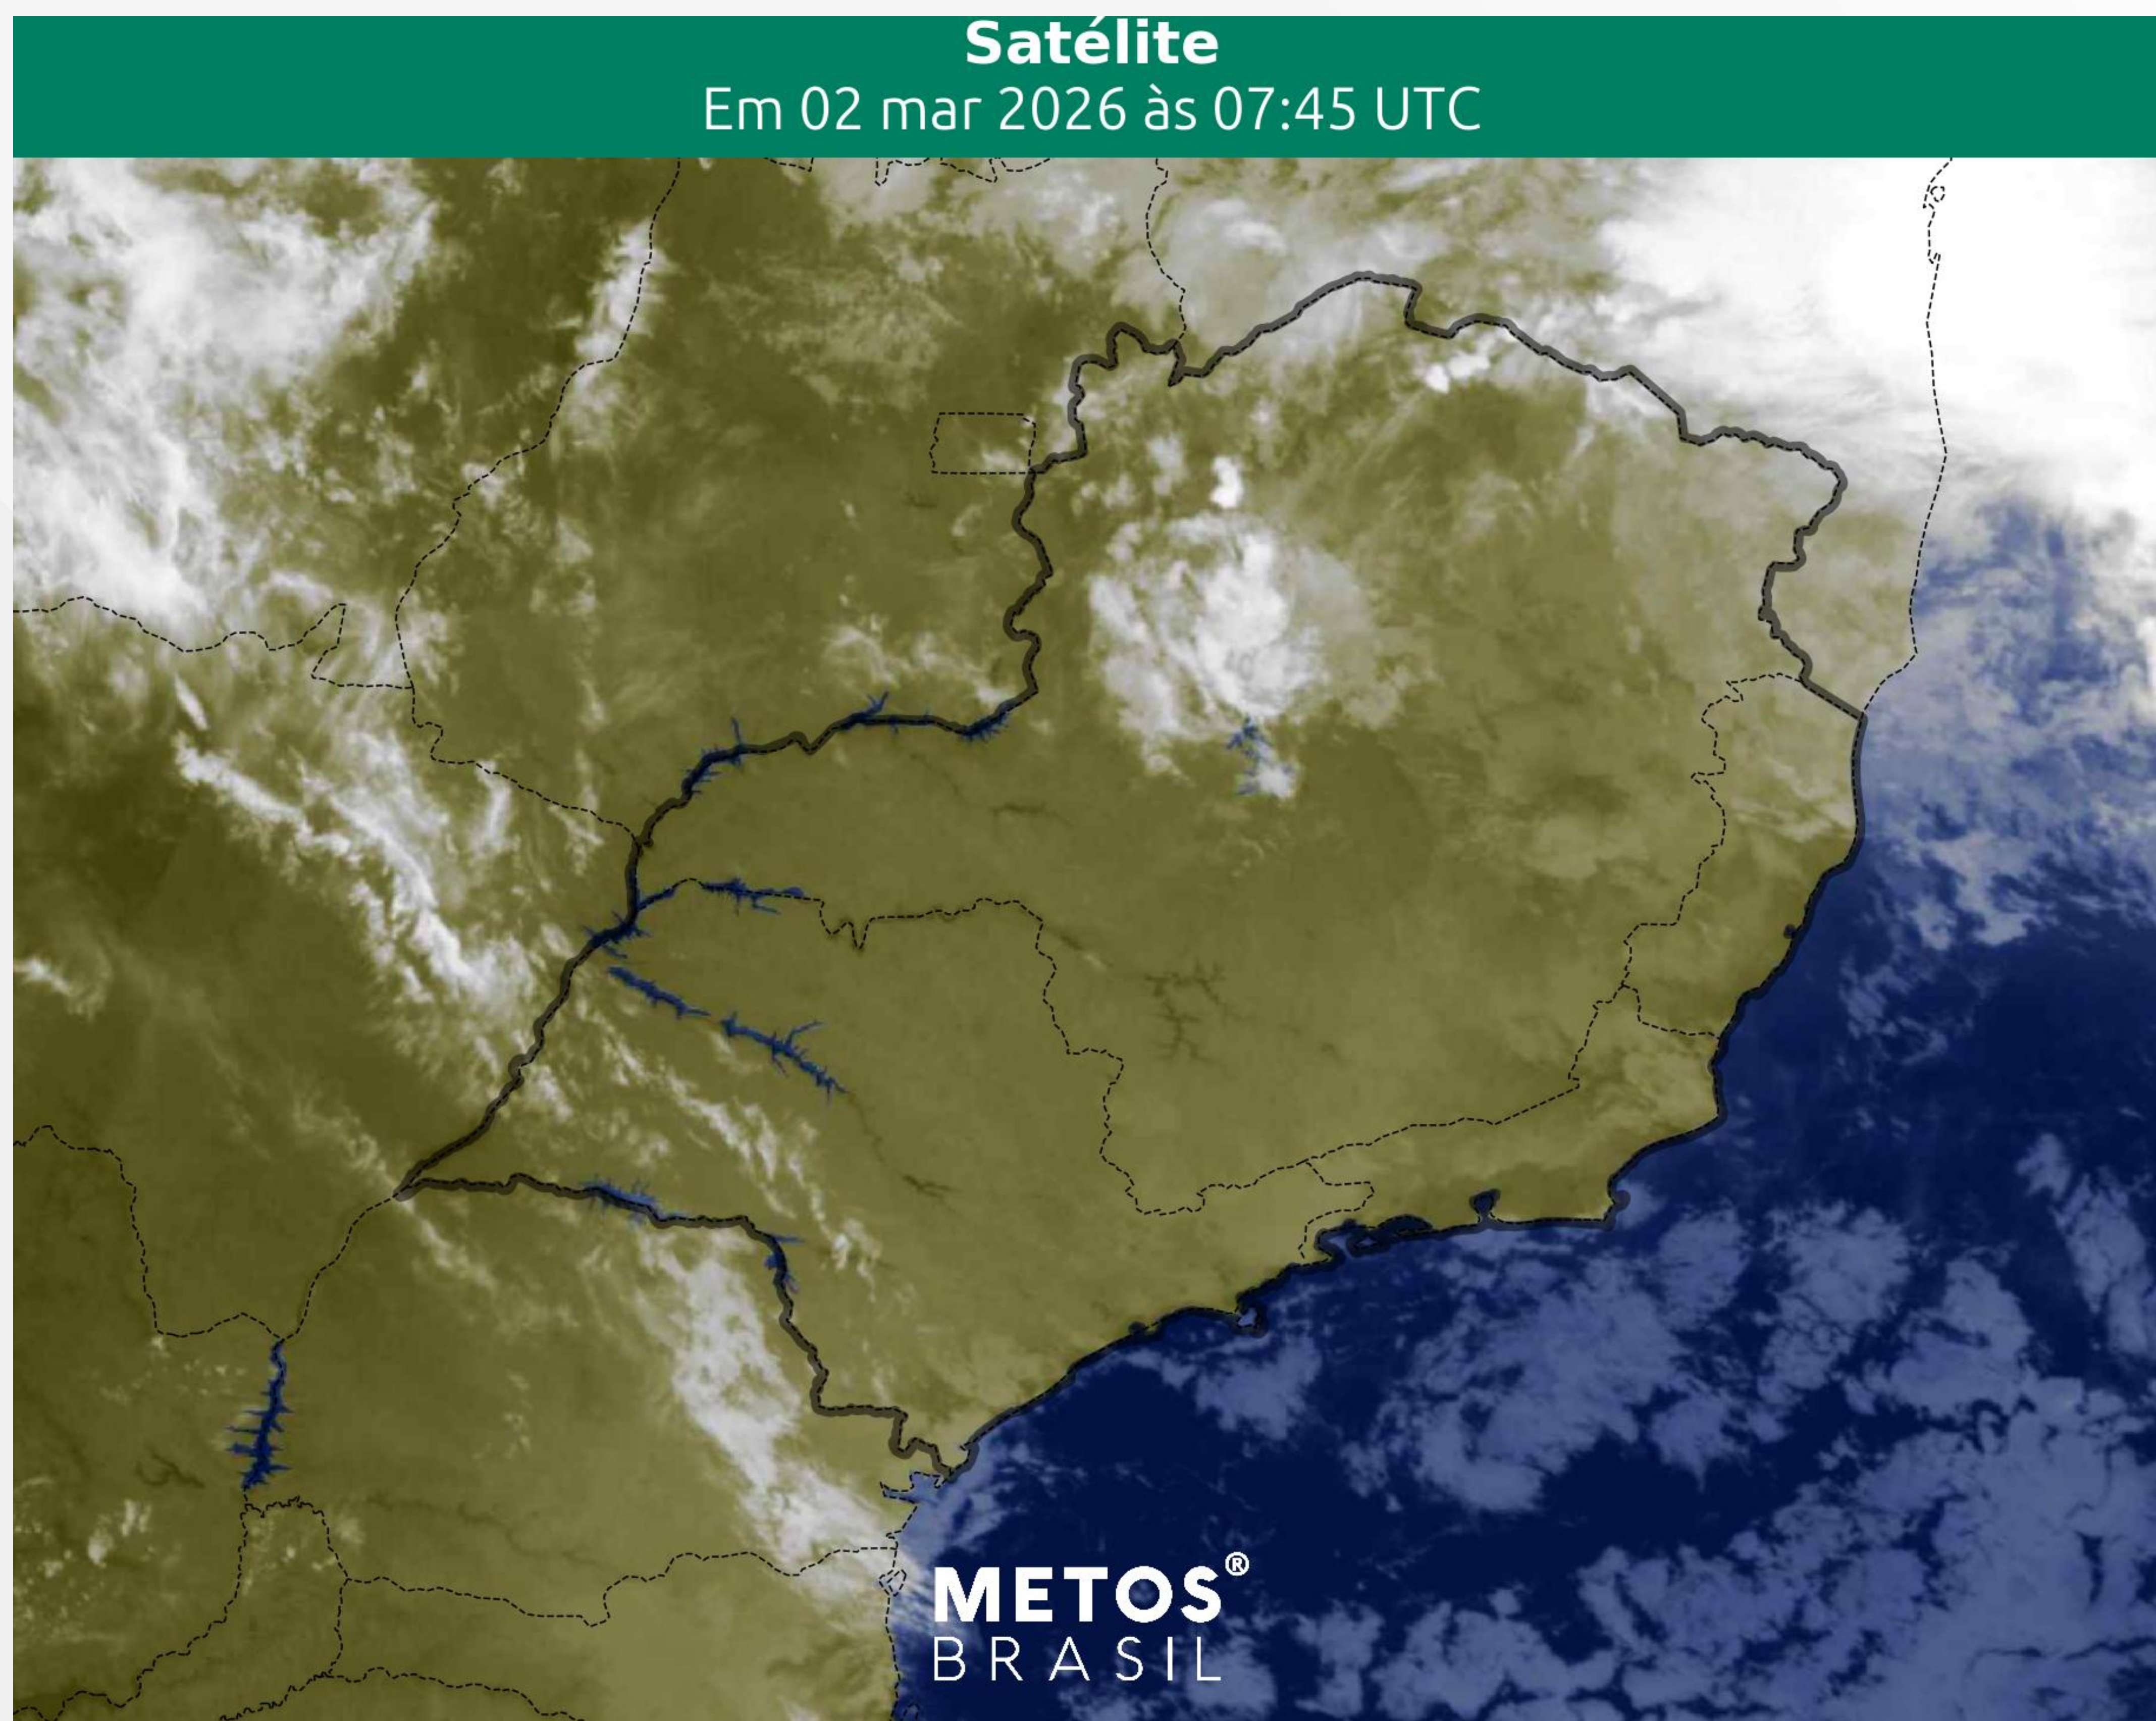

METOS[®] BRASIL

Monitoramento METOS®

A semana inicia com tempo firme e pouca nebulosidade na maior parte dos estados do Sudeste. Essa condição favorecerá a continuidade das atividades de colheita e tratos culturais, visto que a falta de novos sistemas de chuva manterá o tempo aberto e sem precipitações generalizadas no início do período.

A precipitação acumulada indica volumes baixos e mal distribuídos, concentrando-se levemente em áreas isoladas do norte de Minas Gerais. Em São Paulo e sul de Minas, a previsão aponta para a ausência de chuvas significativas.

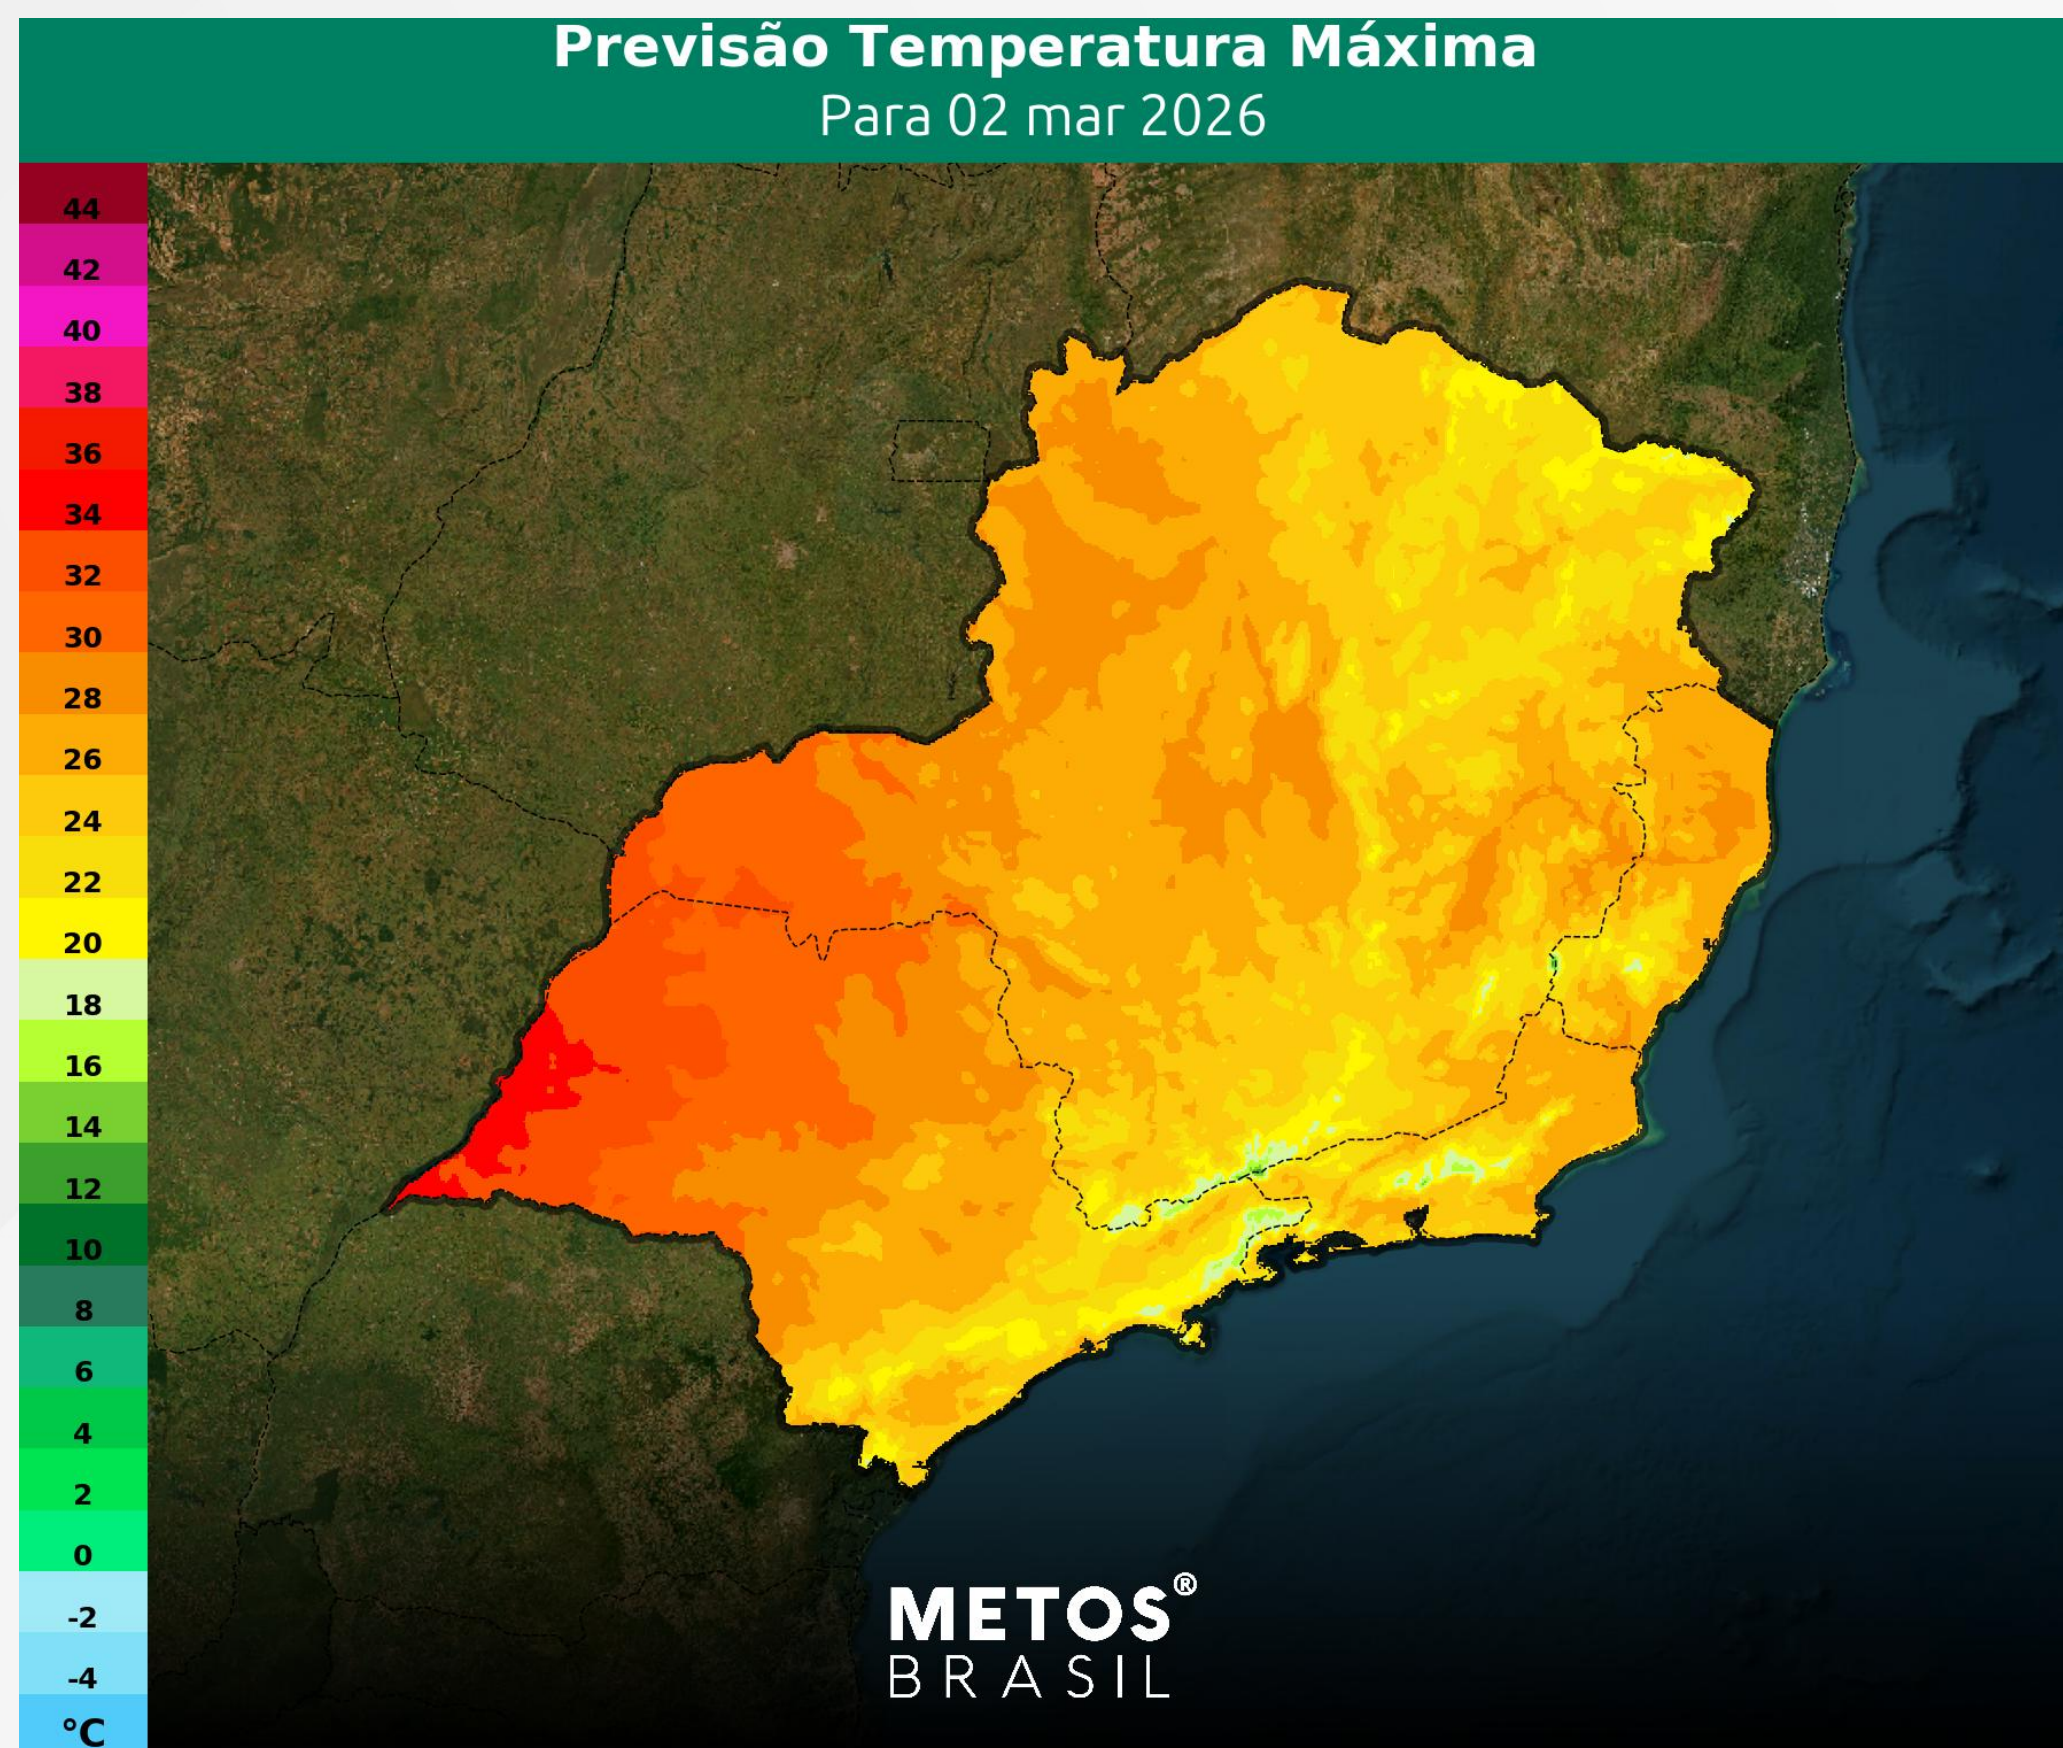

As temperaturas máximas apresentarão elevação gradual ao longo da semana, o que aumentará a perda de umidade nas áreas de café e cana-de-açúcar. Esse comportamento térmico, somado à pouca chuva, resultará em um declínio da água disponível no solo, especialmente no oeste paulista e no Triângulo Mineiro, exigindo atenção ao vigor das lavouras.
